

JUNE 2022 lunation from May 30 to June 28th 2022

Planetary Motions

It is worth getting up early in June to see 5 of the visible planets lining up. By the 15th they will be visible on the Eastern Horizon. Between Venus and Mars, Uranus will reside though unseen to us. As well, between Jupiter and Saturn, Neptune will shine down unseen by the human eye. The Pleiades will mark the sky near Venus in Taurus on the 16th.

Mercury is out of bounds July 6 until July 13th.

The Moon is out of bounds beginning May 30th.

A planet/moon is considered out of bounds when its declination is beyond the outer bounds or limits of that of the Sun, greater than 23 degrees and 27 minutes of declination, either North or South. The energies of these planets tend to be a little out of control as described as a "wild card". We may be acting out of character in the areas of life represented by the planet or moon that is out of bounds.

May 30, Mon: **New Gemini Moon** (09 Ge 03) **4:30a**

The **Gemini** new moon is in the window of the Sunday **Mars Jupiter** conjunction infusing it with the energy of strong fiery action. This moon is conjunct the royal red star **Aldebaran** that marks the eye of the bull constellation.

Aldebaran brings alchemy and charged the intensity of the polarity of opposites characteristic of Gemini.

Gemini represents the mind and the realm of all possibilities. With Mercury in retrograde (a time of less linear thinking and more creative expression) so close to this new moon what opportunity have you experienced to upgrade your thinking, take a new perspective or learn something new? Gemini is in-service to spirit connecting with the magic of all possibilities in the realm beyond duality. Will you react to or be triggered in the same ways as in the past and crystalize past challenges at the same energy level or can you bring awareness to this new portal, a new vision of equanimity and acceptance is perhaps crazy wisdom? With **Aldebaran** present choosing the capacity to live in the middle between opposite ends of polarity could bring new in prosperity.

Jun 1, Wed:

Jupiter and **Mars** will receive additional illumination and inspiration to take action as the apogee **Moon in Cancer** squares them both today. When the moon is apogee it is located furthest from the earth.

Jun 3, Fri. **Mercury SD** (26 Tau 05) at 1am is near the **Pleades**, the Seven Sisters, an open star cluster in the constellation of the Bull and Twin.

- **Mercury Stationing Direct** begins a new Mercury cycle in the Taurus overtone. This is the **Mercury Apollo Phase**, when Mercury reaches 10 degrees from the sun.
- **26 Ta** is the degree opposing the May 15 Scorpio Total Lunar Eclipse at 26 Scorpio.
- **The Pleiades Mythology:** In Greek mythology these seven stars represented the seven daughters of Atlas and Pleione. They appeared in the spring and were said to be in service to Artemis, or Diana the goddess of the hunt, earth renewal and sustenance. The story says When the hunter, Orion pursued the daughters, Zeus transformed them into doves to keep them safe and placed them in sky where Orion continues to chase them through the sky.
- This is the nearest star cluster to Earth and thought by some to be the origin of some of Earth's inhabitants.
- According to *Constellation of Words*, The Pleiades is related to abundant crops. They are also connected with traditions of the Flood in many cultures. The etymology of their name is related to the Greek word pleiôn, meaning "plenty" from pleos, 'full or many'.
